Developing Applications and Automating Workflows using Cisco Platforms (DEVASC)

Course ID #: 7000-216-ZZ-Z

Hours: 35

Course Content

Course Description:

This class includes lecture sections and self-study sections. In instructor-led classes, lectures are delivered in real-time, either in person or via video conferencing. In e-learning courses, the lectures are on recorded videos. In both versions, you will need to review self-study sections on your own before taking the certification exam.   Lecture: Practicing Modern Software Development Introducing Network-Based APIs Consuming REST-Based APIs Employing Programmability on Cisco Platforms Relating Network and Applications Employing Model-Driven Programmability with YANG Deploying Applications Testing and Securing Applications Automating Infrastructure Self Study: Describing Software Development Process Designing Software Introducing Cisco Platforms Describing IP Networks (ELT only).

Course Objectives:

After taking this course, you should be able to: Describe the importance of APIs and use of version control tools in modern software development Describe common processes and practices used in software development Describe options for organizing and constructing modular software Describe HTTP concepts and how they apply to network-based APIs Apply Representational State Transfer (REST) concepts to integration with HTTP-based APIs Describe Cisco platforms and their capabilities Describe programmability features of different Cisco platforms Describe basic networking concepts and interpret simple network topology Describe interaction of applications with the network and tools used for troubleshooting issues Apply concepts of model-driven programmability to automate common tasks with Python scripts Identify common application deployment models and components in the development pipeline Describe common security concerns and types of tests, and utilize containerization for local development Utilize tools to automate infrastructure through scripting and model-driven programmability.

Target Audience:

This course is designed for anyone who performs or seeks to perform a developer role and has one or more years of hands-on experience developing and maintaining applications that are built on top of Cisco platforms.   The course is appropriate for software developers, application developers, and network engineers who want to expand their skill base and validate their skills in programmability, software, and automation. Students preparing for Cisco Certified DevNet Associate certification will also find this material useful.   The job roles best suited to the material in this course are: Network automation engineer Software developer System integration programmer Additional job roles that might be interested: Infrastructure architect Network designer.

Prerequisites:

There are no formal prerequisites for Cisco Certified DevNet Associate certification, but you should make sure to have a good understanding of the exam topics before taking the exam.   And before taking this course, you should have: Basic computer literacy Basic PC operating system navigation skills Basic Internet usage skills Hands-on experience with a programming language (specifically Python)
