Using Flash Fill To Break Up Alphanumeric Values

1. Select the first blank cell that is touching the data set containing the alphanumeric value.
2. Type in the first part of the alphanumeric value and tap the **Enter** key.
3. Use the **CTRL E** key command to run Flash Fill.
   a. This will capture that section of the alphanumeric value for each row.

12ad546	12
412agtd533347	412
2333add548	2333

4. Select the next blank cell beside the data set and enter the next part of the alphanumeric value, tap the **Enter** key.
5. Use the **CTRL E** key command to run Flash Fill.

12ad546	12	ad
412agtd533347	412	agtd
2333add548	2333	add

6. Repeat to extract each section of the alphanumeric value.

12ad546	12	ad	546
412agtd533347	412	agtd	533347
2333add548	2333	add	548
