

## HTML base page layout code

All the colors used in this example are simply there to see the object sizes as you test the code. The height and width of the objects are again set to define parameters while testing the code. You should change these to meet the page requirements of your own when the code is functioning correctly.

**If copying and pasting this code: you will need to replace the quotation marks to make this work.**

```
<DOCTYPE! HTML>
<html>

<head>
  <title>Page Name </title>
  <style>
    /*ID's*/
    #container {margin:0 auto; background-color:yellow; width:600px;}
    #left { width:150px; float:left;}
    #right { width:425px; float:right;}
    /* Basic Placeholder Tags*/
    Body { margin:0px; background-color:white;}
    Header { background-color:grey; height:75px;}
    Nav { background-color:red; height:45px;}
    Section { background-color:green; color:white;}
    Footer { background-color:navy; clear:both;}
  </style>
</head>
<body>
  <div ID="container">
    <header>This is the Header area</header>
    <nav> This is the Nav area</nav>
    <section ID="left"> This is the left content side</section>
    <section ID="right"> This is the right content side</section>
    <footer> This is the Footer area</footer>
  </div>
</body>
</html>
```
