Right-clicking a tool with a small triangle in the corner will instantly expand all the hidden tools beneath. You can also click and hold the mouse button until the hidden tool set expands.

The illustration below shows all the hidden tools on each toolset.

When the tool set is expanded, you will see the key commands for the tool. In Photoshop, all tools in the set share the same key command. To switch tools in the set hold the Shift key and use the tool key command.
