Course Content

Course Description:
This five-day course explains how to implement and manage virtualization infrastructure in a software-defined datacenter by using System Center 2016 Virtual Machine Manager. The course also describes how to monitor the infrastructure by using System Center Operations Manager and protect it by using Data Protection Manager.

At Course Completion:
After completing this course, student will be able to:
- Explain the different virtualization options.
- Install and manage Hyper-V on Windows Server 2016.
- Install and configure System Center 2016 Virtual Machine Manager.
- Configure and manage the Virtual Machine Manager Library and library objects.
- Manage the networking fabric.
- Create and manage virtual machines by using Virtual Machine Manager.
- Manage clouds in Virtual Machine Manager.
- Manage services in Virtual Machine Manager.
- Monitor virtualization infrastructure by using System Center Operations Manager.
- Implement and manage Hyper-V Replica and Azure Site Recovery.
- Protect virtualization infrastructure by using Data Protection Manager.

Target Student:
This course is intended for IT professionals and administrators who are responsible for designing, implementing, and managing virtualization infrastructure in a software-defined datacenter by using System Center 2016 Virtual Machine Manager. The main focus of this course is on managing Hyper-V virtualization infrastructure in Windows Server 2016, although the course also covers other virtualization platforms that can be managed by using Virtual Machine Manager 2016.

Prerequisites:
In addition to their professional experience, students who attend this training should already have the following technical knowledge:
- An understanding of TCP/IP and networking concepts
- An understanding of different storage technologies and concepts
20745 - Implementing a Software-Defined DataCenter
Course ID #: 1410-885-16-W
Hours: 35

- Familiarity with different types of virtualizations
- Familiarity with Windows Server and Windows Server administration
- An understanding of Windows PowerShell
- Students should have the ability to work in a team/virtual team and possess good documentation and communication skills.

Students who attend this training can meet the prerequisites by attending the following courses, or obtaining equivalent knowledge and skills:
- 20740 - Storage & Compute with Windows Server 2016
- 20741 - Networking with Windows Server 2016

**Topics:**

**Module 01: Introduction to server virtualization**
This module explains the different virtualization solutions. It also describes the concepts of software-defined datacenter and Microsoft Azure.

**Lessons**
- Overview of Microsoft Virtualization
- Introduction to the software-defined datacenter
- Extending virtualization to the cloud
- Lab: Evaluating virtualization options
- Selecting the appropriate virtualization method
- Creating Azure virtual machines

After completing this module, students will be able to:
- Describe the virtualization options available in Microsoft.
- Describe the concept of a software-defined datacenter.
- Describe how to extend a datacenter to the cloud.

**Module 02: Overview of Hyper-V virtualization**
This module explains how to install and manage Hyper-V in Windows Server 2016.

**Lessons**
- Installing and configuring the Hyper-V role
- Creating and managing virtual hard disks and virtual machines
- Creating and using Hyper-V virtual switches
- Implementing failover clustering with Hyper-V
- Lab: Creating and managing virtual hard disks and virtual machines
- Installing and configuring the Hyper-V server role
- Creating a Nano Server virtual machine
- Configuring virtual machines and virtual hard disks
- Lab: Implementing failover clustering with Hyper-V
- Creating a Hyper-V failover cluster
- Managing a Hyper-V failover cluster
After completing this module, students will be able to:
- Install and configure the Hyper-V role.
- Create and manage virtual hard disks and virtual machines.
- Create and use Hyper-V virtual switches.
- Implement failover clustering.

Module 03: Installing and configuring System Center 2016 Virtual Machine Manager
This module explains how to install and configure System Center 2016 VMM for managing a virtualization environment.

Lessons
- Overview of System Center 2016 VMM
- Installing System Center 2016 VMM
- Adding hosts and managing host groups
- Lab: Installing and configuring System Center 2016
- Installing and configuring System Center 2016
- Managing hosts and host groups
- Managing an Azure subscription by using VMM

Module 04: Managing storage fabric and fabric updates
This module explains how to manage storage fabric and fabric updates in VMM.

Lessons
- Overview of server virtualization storage technologies
- Managing storage fabric
- Managing fabric updates
- Lab: Managing storage fabric and fabric updates
- Implementing a storage infrastructure
- Creating a file server cluster and a storage QoS policy
- Managing fabric updates

After completing this module, students will be able to:
- Describe the storage technologies that VMM utilizes.
- Deploy and manage a storage fabric in VMM 2016.
- Manage updates of the VMM 2016 fabric.

Module 05: Configuring and managing the Virtual Machine Manager Library and Library Objects
This module describes how to configure and manage VMM library and library objects. It also describes the differences between profiles and templates and how they are used.
20745 - Implementing a Software-Defined DataCenter
Course ID #: 1410-885-16-W
Hours: 35

Lessons
- Overview of the VMM library
- Preparing Windows for deployment in VMM
- Working with profiles
- Working with virtual machine templates
- Lab: Configuring and managing VMM library and library objects
- Configuring and managing a VMM library
- Creating a Windows image for the VMM library
- Creating and managing profiles and templates

After completing this module, students will be able to:
- Explain the primary networking concepts in System Center 2016 VMM.
- Implement the Software Defined Networking by using System Center 2016 VMM.
- Describe the core components available in Network Controller.

Module 07: Creating and managing virtual machines by using Virtual Machine Manager
This module explains how to create and manage virtual machines by using VMM.

Lessons
- Virtual machine management tasks
- Creating, cloning, and converting virtual machines
- Lab: Creating and managing virtual machines by using System Center 2016 VMM
- Creating a virtual machine and modifying its properties
- Creating and managing checkpoints
- Cloning and migrating a virtual machine

Module 08: Managing clouds in System Center 2016 Virtual Machine Manager
This module explains how to create and manage clouds by using VMM.

www.tcworkshop.com
Lessons
- Introduction to clouds
- Creating and managing a cloud
- Creating user roles in VMM
- Lab: Managing clouds in System Center 2016 VMM
- Creating a private cloud
- Creating user roles

Module 10: Monitoring a virtualization infrastructure by using System Center Operations Manager
This module explains how to use Operations Manager for monitoring virtualization infrastructure.

Lessons
- Operations Manager architecture and security
- Using Operations Manager for monitoring and reporting
- Integrating Operations Manager with VMM and DPM
- Lab: Monitoring a virtualization infrastructure by using Operations Manager
- Implementing the Operations Manager agents
- Integrating Operations Manager with VMM

After completing this module, students will be able to:
- Describe the Operations Manager architecture and explain how to secure access to Operations Manager data.
- Use Operations Manager for monitoring and reporting.
- Integrate Operations Manager with VMM and DPM.

Module 09: Managing services in Virtual Machine Manager
This module explains how to create and manage services in VMM.

Lessons
- Overview of services in VMM
- Creating and managing services in VMM
- Lab: Managing services in VMM
- Creating a service template
- Deploying a service and updating service template
- Scaling out service and updating the service

After completing this module, students will be able to:
- Describe the services in VMM.
  Create and manage services in VMM.
Module 11: Implementing and managing Hyper-V Replica and Azure Site Recovery
This module explains how to implement and manage Hyper-V Replica and Azure Site Recovery

Lessons
- Implementing and managing Hyper-V Replica
- Implementing and managing Azure Site Recovery
- Lab: Implementing and managing Hyper-V Replica and Azure Site Recovery
- Configuring and Managing Hyper-V Replica
- Configuring and Managing Azure Site Recovery

After completing this module, students will be able to:
- Implement and manage Hyper-V Replica.
- Implement and manage Azure Site Recovery.

Module 12: Protecting a virtualization infrastructure by using Data Protection Manager
This module explains how to use DPM for protecting virtualization infrastructure.

Lessons
- Overview of backup and restore options for virtual machines
- Configuring and managing DPM for virtualization infrastructure protection
- Lab: Protecting virtualization infrastructure by using DPM
- Configuring a DPM server and installing DPM protection agents
- Creating and configuring protection groups
- Recovering VMs and other data
- Providing online protection with DPM

After completing this module, students will be able to:
- Describe the backup and restore options for VMs.
- Configure and manage DPM for protecting a virtualization infrastructure.
